SRH Tokenization OS platform guide

How the console works, who uses it, and the processes it runs from investor onboarding to tokens in a wallet.

Web console and investor portal · October 2026

THE MODEL

One technology layer, two business lines

SRH Markets

Own regulated platform

SRH issues, distributes and services tokenised products under its own licences.

FSRA, ADGM · VARA, Dubai

Technology for licensed institutions

The same 11 modules, deployed three ways

Talara Securities
White-label console

Meridian Bank
Headless API

Northgate AM
Dedicated deployment

GETTING IN

Open the demo in four steps

1. **Open the link** — Works in any modern browser, on desktop or phone.
2. **Pick an environment** — SRH Markets or one of the three institutions.
3. **Pick a role** — Each role sees only what it is entitled to.
4. **Sign in** — Device, SSO, hardware key and policy checks run in turn.

New investors start from **Open an investor account** on the same screen. Switch role at any time from the account menu at the top right.

THE MODULES

- Identity and investors
- Compliance
- Asset structuring
- Tokenization
- Primary market
- Payments and settlement
- Custody and wallets
- Ownership and registry
- Asset servicing
- Secondary markets
- DeFi gateway
- Integrations and API

WHO USES IT

Six roles, one rulebook

Every screen and every action is checked against the role and the institution's licensed modules. The same checks run on the server, so a hidden button is never the only control.

Layla Haddad
Operations
Head of Platform Operations, SRH Markets

Orders · Reconcile · Tokens

Omar Siddiqui
Compliance officer
Chief Compliance Officer, SRH Markets

KYC · Policy · Approvals

Daniel Reyes
Platform admin
Platform Administrator, SRH Inc

Configure · Tokens · DeFi

Sara Kim
Issuer admin
Director, Investor Relations, JALP I SPV

Assets · Servicing · Approvals

Ahmed Al Mansoori
Investor
Professional investor

Portfolio · Subscribe · Trade

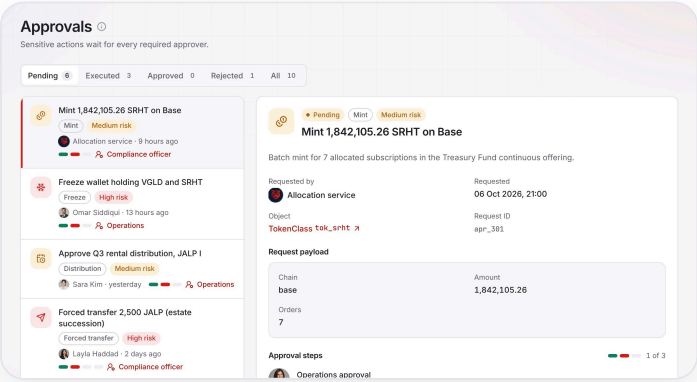

Grace Okafor
Auditor
Engagement Partner, Okafor and Lane Audit

Read only · Audit trail · Reports

What each role can do

● Acts ○ Views – No access

Area	Operations	Compliance	Platform admin	Issuer admin	Investor	Auditor
Onboard investors	●	●	●	○	–	○
KYC decisions	○	●	○	○	–	○
Policy packs and rules	○	●	○	○	–	○
Structure assets	●	○	●	●	–	○
Request token operations	●	○	●	○	–	○
Subscribe to offerings	●	○	○	○	●	○
Decide approvals	●	●	●	●	–	○
Run and resolve reconciliation	●	○	●	○	–	○
Distributions and corporate actions	●	○	○	●	–	○
Secondary market orders	●	○	●	○	●	○
Modules, branding and API keys	○	○	●	–	–	○

Segregation of duties
A requester never approves their own request. Each approval step needs a different person.

Mints of USD 1m or more
Operations, compliance, then an HSM signer (3 of 5)

Freeze, forced transfer, recovery
Always routed to compliance with a recorded reason

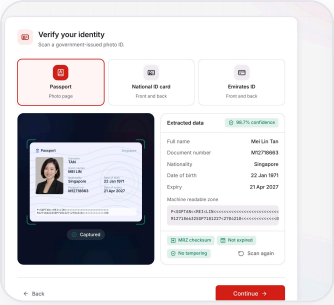

Hash-chained audit trail
Every decision and state change, verifiable from the audit screen

PROCESS 1

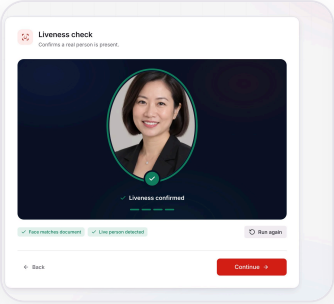

Investor onboarding

About five minutes for the applicant. Identity, screening and wallet risk run with the connected providers.

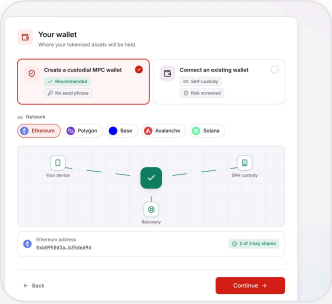

1. **Account type** — Individual or company
2. **Details** — Validated as typed
3. **Identity document** — Scan and MRZ check
4. **Liveness** — Face matches document
5. **Investor profile** — Retail, professional or accredited
6. **Wallet** — MPC wallet or own wallet
7. **Provider checks** — Veridex, Sentinel, Chainscope
8. **Compliance review** — Officer approves KYC

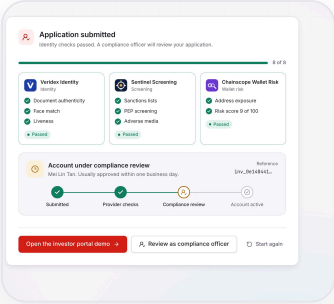

Document read and checked

Liveness confirmed

MPC wallet, 2 of 3 key shares

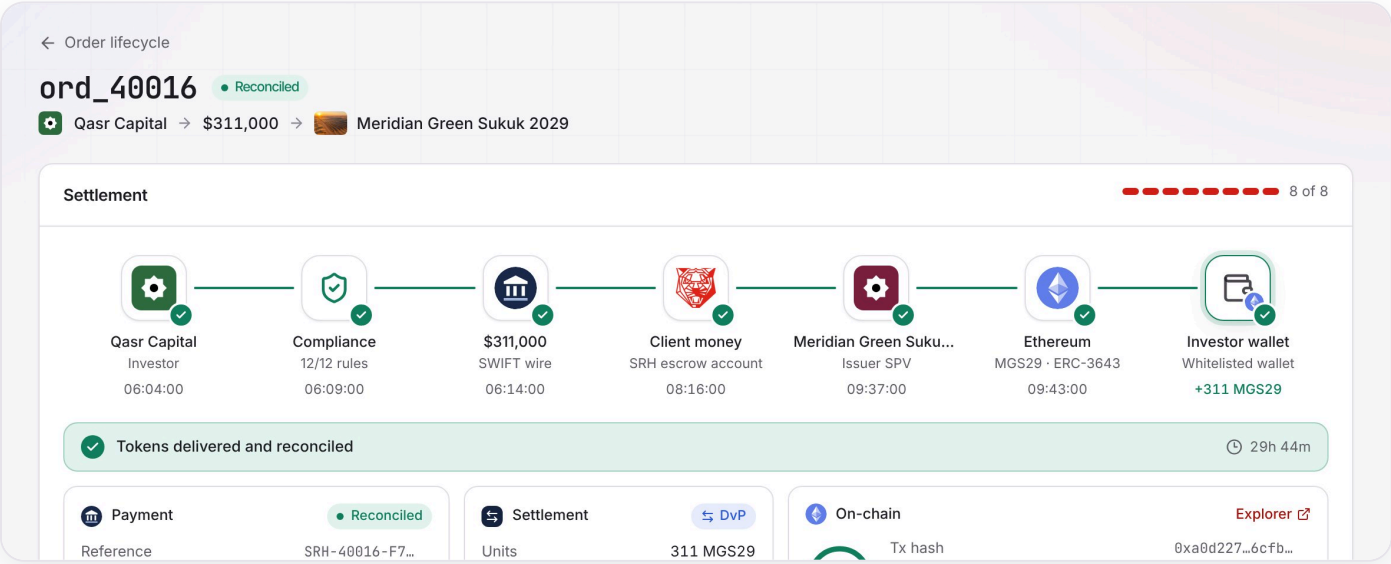

Submitted for compliance review

PROCESS 2

From subscription to tokens

Eight event-driven stages. Each one is recorded, visible to operations and to the investor, and reconciled at the end.

1. **Order received** — Investor signs
2. **Eligibility** — Five rule layers
3. **Payment instructed** — Bank or stablecoin
4. **Payment confirmed** — Funds in escrow
5. **Allocated** — Units from the book
6. **Settled** — DvP, atomic or async
7. **Minted** — On the chosen chain
8. **Reconciled** — Chain, register, ledger

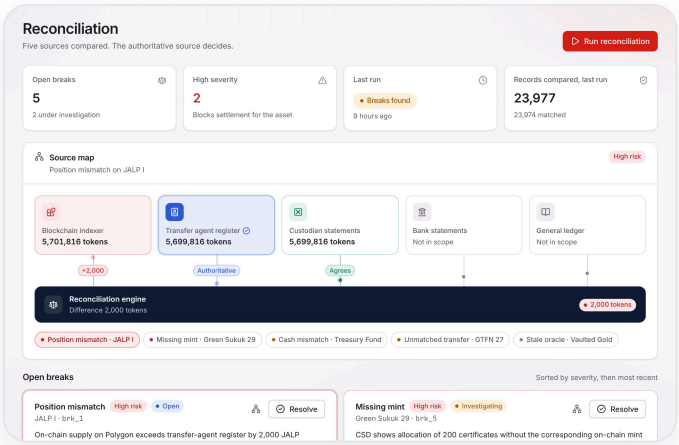

The settlement view follows the money and the tokens across every party, with live confirmations and explorer links.

SWIFT · SEPA · Local rail · USDC · USDT · AED stablecoin · Tokenised deposit · Ethereum · Polygon · Base · Solana · Avalanche

PROCESS 3

Reconciliation

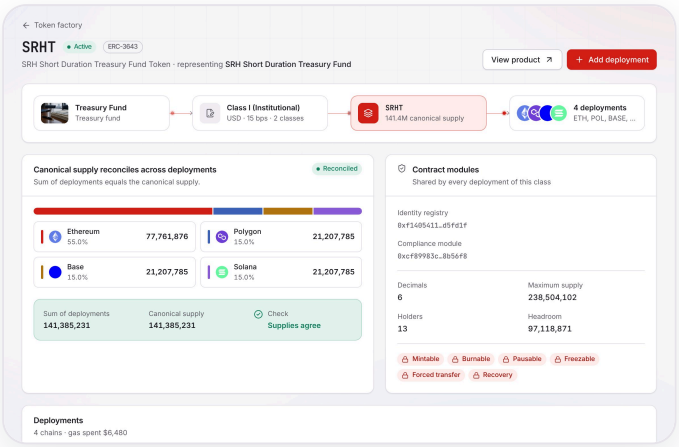

Five sources are compared on every run. The authoritative source decides, and each break carries an owner and a severity.

PROCESS 4

Token operations

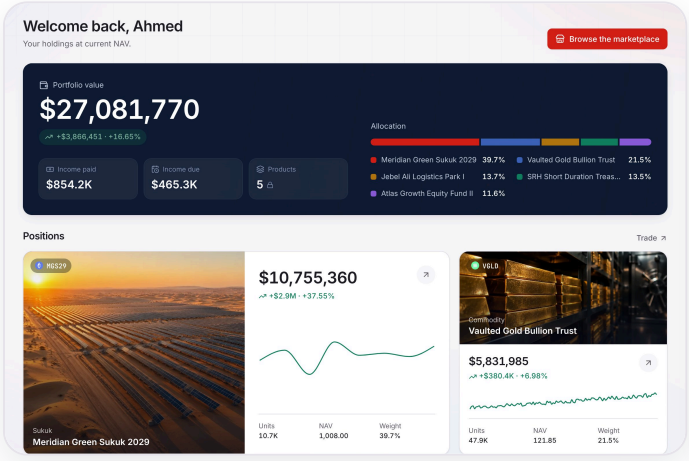

One canonical token class per product, deployed across chains. Supply is checked against every deployment.

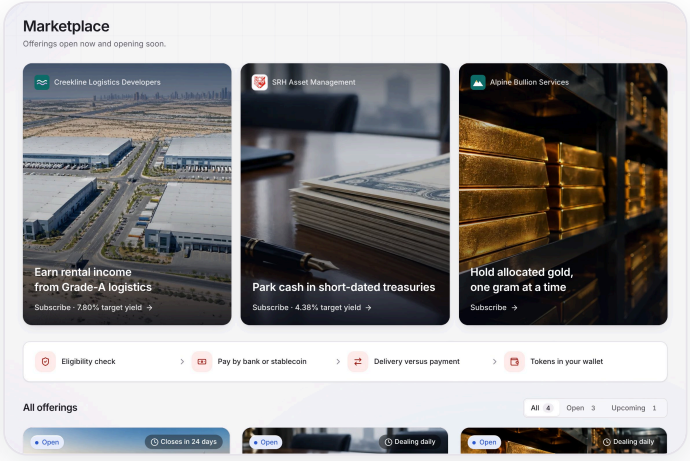

THE INVESTOR SIDE

Portfolio, marketplace and secondary trading

Investors see only their own holdings and orders. Other market participants stay anonymous.

SUGGESTED WALKTHROUGH

A ten-minute demonstration

1. **Sign in to SRH Markets as Operations.**
   Overview shows assets under administration and open decisions.
2. **Order lifecycle, New subscription.**
   Pick the Treasury Fund, an investor, USDC, and sign. Watch the settlement view.
3. **Place a second order of USD 1.5m.**
   The mint waits for approval. Approve the first step in Approvals.
4. **Switch to the Compliance officer, then the Platform admin.**
   Each approves one step. The tokens are then minted and reconciled.
5. **Reconciliation, Run reconciliation.**
   Open a break, see which source is authoritative, and resolve it.
6. **Sign out and open an investor account.**
   Scan, liveness, wallet and provider checks, then review as compliance.
7. **Switch to the Investor.**
   Portfolio, income timeline, marketplace and secondary market.
8. **Change environment to Talara Securities.**
   The same platform in the institution's own brand and licensed modules.
